

Give your users an AI that actually knows your app.

The AI your users already trust, inside the app they love. Boop gives it your app's context and lets it act with one tap.

- 1 Sits on the edge of your app. Tap or swipe it in.
- 2 Answers from their real history and your app's rules.
- 3 Acts in your app with one tap.

KEY HIGHLIGHTS

Users stay in your app

The question, the answer and the next step all happen on your screen, not in another chat app.

A better user experience

Answers built on their plan, their history and how your app works. Advice they can act on right away.

You stay in control

Your brand and your rules. You decide what the AI can see and what it's allowed to do.

Done for you

We build it around your app and run it for you. There's no AI to build, host or maintain.

ACCESS ISN'T CONTEXT

	AI FROM OUTSIDE YOUR APP ChatGPT apps, MCP connectors, phone agents	BOOP, INSIDE YOUR APP
Who it reaches	Only users who pay for an outside AI and connect it to your app	Every user of your app, no AI plan needed
What the model sees	Raw data or static screens, with no sense of how your app works	A short profile of the user, the data the question needs, and your app's rules
How it acts	From outside: calls your API or taps through your screens, in the agent's own interface	From inside: your app's own functions, only the ones you allow, after the user taps Confirm

YOUR DATA

Your data is protected

Each question shares only the data it needs to answer, nothing more.

Nothing kept on our side

Boop reads what it needs, answers, and doesn't keep a copy.

You set the limits

You choose which parts of your app Boop can read and which actions it can offer.

30 days free

No cost and no commitment. We cover the AI usage.

Done for you

We build and set it up. Your team approves it before it goes live.

Pay per active user

After the pilot, you pay only for users who use Boop that month.

Price set up front

Agreed together before you go live. No surprises on day 30.
